

Temptation Foods Limited(TFL), a Mumbai based, large, multi location food processing industry leader with iconic brands as Everfresh, Delika and Karen's have successfully rolled out its new 50 user Enterprise Resource Planning software, OpenMFG, an Open Source based ERP from xTuple Inc in Dec 2008. The ERP program was managed end-to-end by Aptsources Software, a growing consulting firm and partners for xTuple Inc. in Asia.

TFL had earlier engaged Aptsources for aligning their business and Information Technology strategies through a Strategic Information System Planning engagement. The ERP program was the result of this engagement that recommended TFL, to roll out a simple and robust ERP/Business Solution to manage its fast tracked inorganic growth strategy and seamless integration of business processes and geographies.

The OpenMFG roll out covered the critical business processes of Sales Forecasting, Order Processing, Master Production Scheduling (MPS), Material Resource Planning (MRP), Inventory, Procurement, Manufacturing, Costing, Shipments, Accounts Payables and Receivables. Since Temptation Foods, was using a custom built, web based accounting software, Aptsources provided an interface to seamlessly integrate OpenMFG ERP with the Accounting software.

As part of the ERP roll out program, Aptsources undertook the India Localization of OpenMFG, especially for Indian statutes of Central Sales Tax, VAT and Excise Duty. The localisation has been built as a separate "Bolt-On" module to keep the path open for future releases from xTuple for the product.

The roll out, being the first implementation of OpenMFG ERP in Asia, was successfully completed in 6 months with a team of 5 consultants.
